

# Turf-Lock Tapes Seam Sled Instructions

When using the Bond Turf Tape Seaming System, it is of utmost importance to use the seam sled!

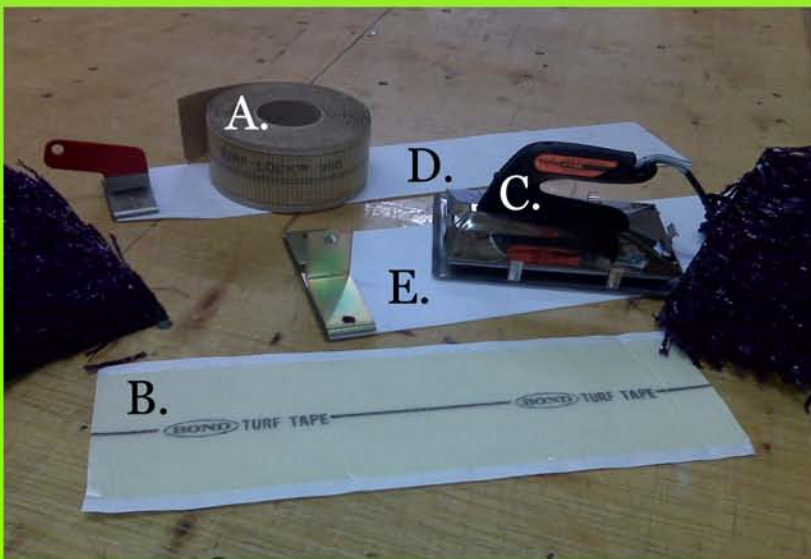

It will align the tape & iron under your seam.

It will give you a solid base when working over rough or uneven surfaces.

It will help you keep the iron running at optimal temperatures and help ensure the complete melting of the adhesive even in adverse weather conditions.

It will enable the installer to easily press and tractor the turf into the molten adhesive for optimal bonding strength and penetration.

It helps eliminate any distortion or uneven seams and helps the base to remain even.
